

**POLICE LINE - DO NOT CROSS POLICE LINE - DO NOT CROSS POLICE LINE - DO NOT CROSS POLICE LINE - DO NOT CROSS**

## Property & Evidence Tracking

All it takes is one lost or misplaced piece of evidence to disrupt a trial or derail a legal proceeding. With cases growing and resources shrinking, you need a streamlined evidence-handling solution that offers higher efficiency and a more secure chain of custody. Got a high volume of items to tag and track? Lexmark, FileTrail have teamed up with system integration partner FALKEN Secure Networks to offer a Web-based state-of-the-art solution for property and evidence tracking.

### A Fully Integrated System

FileTrail software will allow you to track any item no matter where it is located. It makes taking inventory or conducting an audit a quick and painless process. With this software, you can search for items with user-definable index fields, check items in or out and track who has them, and schedule dates for removal and disposal. FileTrail can also generate multiple reports for improved security and accuracy. With the Quick Maps feature, you can even map out an area so you can visually see where an item is located.

FileTrail is Web-based, so no software is loaded on your PC. The software and hardware supports bar codes and RFID media. Further enhancing the system's flexibility and cost-effectiveness is the '5 in 1' Property, Evidence and Asset label, allowing you to tag anything from a crowbar to a handgun.

Listed below are the different configurations you can have with this label:

- RFID peel-and-stick tag
- RFID hang tag
- RFID flag tag
- RFID tag for foam-backed requirements
- Large and small bar code labels

No matter what you need to tag, a Lexmark T654DTN with the RFID option can print and program the labels and FileTrail middleware and application software can track it. Lexmark laser printers also prints crisp, easy-to-read bar codes on many types of media. This means, printing other documents, such as evidence disposition and property records forms, can be done from the same printer as well. Space is a premium, so the fewer the devices the better.

*Locate evidence quickly*

*T654DTN with RFID Option prints RFID evidence label and evidence record*

### Flexible

- Multi-use device
- Multiple media types
- 5" x 7" to legal-size documents
- Supports PCL and ASCII
- No ribbons or calibration
- Multiple input/output options

## The 5 in 1 RFID Property, Evidence and Asset Tag

### About the Embedded RFID Inlay

Higgs-3™ is a 'state-of-the-art' highly integrated single chip UHF RFID Tag IC from industry-leader Alien Technologies. The chip conforms to the EPCglobal Class 1 Gen 2 specifications and provides superior performance for a broad range of UHF RFID tagging applications. The IC also features a factory programmed 64-bit serial number that cannot be altered. In conjunction with the EPC code, this provides a unique "fingerprint" for the tagged item. Exceptional operating range, up to 10m with appropriate antenna. Operating min/max temperature of -20°C to +85°C.

Unique Flexibility and efficiency is provided with this '5 in 1' tag. One RFID Inlay is included with each label. Therefore, a choice of one of 5 possible different label configurations can be selected. Labels are completely customizable to your exact requirements.

## Solution Benefits

- **Multi-Use: Programs, verifies, and prints RFID embedded media** as well as operating as a general purpose laser printer.
- **Eliminate loss.** RFID tracking helps property and evidence officers locate items quickly without reading a label or scanning a bar code. Exit door fixed RFID readers and alarms keep evidence from being removed from the premises without proper authorization.
- **Save time looking for misplaced items.** Evidence handling and tracking time can be reduced by more than 80%.
- **Utilize existing infrastructure.** The solution requires no custom programming and can be easily configured to accommodate existing data and procedures.
- **Create a chain of custody.** Each item is tracked with an unalterable log recording of where it's been, who's accessed it and when it was returned.
- **Ease search and recovery.** The browser-based system allows clerks to easily find what they're looking for based on multiple search criteria, such as case number, evidence type, date, officer and location.

Save time, reduce cost and increase efficiency and credibility with the FileTrail and Lexmark fully integrated solution from FALKEN Secure Networks.

### Tamper-Evident RFID:

FALKEN Secure Networks and Mikoh work together with customers in ensuring the physical security of RFID tags and offers a broad suite of patent-protected RFID and non-RFID technologies incorporated into low cost pressure-sensitive security seals. The physical security of RFID tags –and specifically guarding against tags being removed or substituted–is increasingly being recognized as vital in many applications. For RFID end users who need to protect materials, documents or merchandise from security compromises, MIKOH's tamper-evident RFID technology is flexible, scalable and easily integrates into any RFID system. MIKOH's RFID and non-RFID tamper-evident solutions provide a unique one-to-one relationship between a tag and an asset and eliminates the major physical security vulnerability inherent in RFID systems. These solutions ensure that the proper secure processes and labeling technologies are implemented in order to ensure the integrity of the evidence collection, movement and management with an uncompromised chain of evidence custody. (See the FSN Brochure on [Tamper Evident RFID](#) on our web site).
