

High Performance Fully-Rugged Notebook - GD8000

RUGGED RELIABILITY Bring on the temperature extremes, humidity, vibration, dust, drops and spills. Designed to meet and even exceed military rugged requirements (MIL-STD 810F), the GD8000 has a range of rugged features from the water tight case (IP64) to the shock mounted display to the capability to withstand 48" drop tests.

ULTRA-VIEWABLE TOUCHSCREEN DISPLAY Streaming sunlight may wash out other displays but you'll still see the GD8000 screen with its award winning 13.3" DynaVue® touchscreen display. So if you're outside, or even near a window, in low light or bright, this screen shines.

COMPUTING PERFORMANCE The GD8000 works as hard as you do, able to leverage multi-thread applications and complex video like moving GPS maps or scrolling license plate readers. In fact, it can probably run circles around your desktop with the latest Intel® 1.86 GHz low voltage SL9400 Core™2 Duo processor, an 1066 MHz Front Side Bus, 6MB L2 cache, up to 4GB DDR3 memory and the Intel GM45 Express Chipset.

COMPLETE WIRELESS CONNECTIVITY No matter your network or preferred wireless technology, the GD8000 keeps you connected with up to four integrated wireless devices - WI-FI (WLAN), Cellular Data (WWAN*), GPS and Bluetooth with sophisticated RF shielding and noise filtering - your communication options cross the spectrum so you can count on coverage.

*WWAN currently only supported in North America. For country specific support, please contact your local sales representative.

ERGONOMIC Computers shouldn't be uncomfortable. The GD8000 is the lightest, most durable fully-rugged notebook and even includes a full backlit keyboard so you can work efficiently and safely at night.

SECURITY The GD8000 has security features designed to protect users, information and networks. It includes TPM 1.2 Network Security Standard, integrated fingerprint reader, integrated CAC (Smart Card) reader, a removable hard drive and security lock slot.

WARRANTY + SERVICE Service and support are never an issue with a standard 3-year warranty. Plus enterprise customers can choose from a comprehensive suite of support levels including extra options like Mobile Help Desk.

SAVING ENERGY You can work longer while using less energy because the ENERGY STAR® certified GD8000 is designed with your productivity and the environment in mind. With sophisticated power management settings you can cut power consumption on both AC and battery, ultimately saving money while reducing greenhouse gas emissions. Additionally, our packaging is designed to reduce environmental impact. [Click here for more information about ENERGY STAR.](#)
